

OTAVA® Delivers Private Cloud Solution

Partnering with OTAVA helps Form I-9 Compliance improve system performance.

The Challenge

Form I-9 had originally built out its own data centers for hosting the company's services, including a remote failover site. As the company's solutions are centered around personal identification information (PII), data integrity, security and compliance were top priorities, and this on-premise environment allowed the company to maintain full control. However, when the company entered a rapid growth phase, it faced the decision of whether to continue investing in its own data center for its production servers or migrate to the cloud.

Simple financial, technical, and operational analysis confirmed that moving its operations to the cloud was the right approach. A private self-managed cloud solution with managed storage services and Data Protection as a Service (DPaaS) on the back end would provide the control and security Form I-9 required, and its applications and database infrastructure were cloud-ready. Additionally, moving to a fully cloud-based architecture would allow the company to forego a major capital investment in its own data center and reduce its operating costs.

“OTAVA's private cloud platform is secure and compliant which is of paramount importance to us as our business handles highly regulated information.”

Chas Patterson, CIO of Form I-9 Compliance

The Solution

The Form I-9 IT team, led by CIO Chas Patterson, evaluated a range of options for migrating its production environment to the cloud, including major vendors in the cloud services space like AWS and Microsoft Azure.

The team realized quickly that hyperscaler solutions lacked the cost transparency, flexibility, and security capabilities that Form I-9 required. Additionally, working with a large public cloud provider would mean that support would primarily be provided through online forums and knowledge bases. No live assistance would be available if and when needed.

To overcome these issues, Form I-9 turned to OTAVA to modernize the infrastructure supporting its web-delivered service, improve the resiliency of its systems, and lower its operating and capital costs.

SOC 1, 2 & 3

OTAVA offers a range of hybrid IT and cloud solutions on a VMware Cloud Verified platform from private cloud to resource pooled to shared cloud environments. In this case it recommended that Form I-9 migrate its current environment to OTAVA's self-managed private cloud platform, purpose-built for service providers.

Utilizing its high touch, consultative approach to partnership, OTAVA quickly and efficiently moved several terabytes of data from Form I-9's in-house data center to its Las Vegas cloud node, without any ingress fees, for the new self-managed private cloud environment. Offering greater visibility and control, the private environment was ideally suited for the company's systems and PII data.

"OTAVA's private cloud platform is secure and compliant which is of paramount importance to us as our business handles highly regulated information," said Patterson.

To further protect its data, OTAVA added its Data Protection as a Service across all locations to maximize data storage integrity and resilience. The OTAVA team orchestrated the migration carefully so there was never a time when Form I-9 systems and data were unprotected. Together, OTAVA's private cloud and Form I-9's environment create a scalable, reliable, and fully managed solution.

The Results

Today, OTAVA's private cloud powered by VMware provides Form I-9 with a compliant, efficient, cost-effective platform for its production environment. Migrating to the cloud has created significant cost savings for Form I-9 and allows the company to scale up as needed without requiring extra resources. The DPaaS solution provides Form I-9 with even greater protection. This resilient architecture coupled with the fact that OTAVA bakes compliance into every solution supports Form I-9's compliance reporting process.

"OTAVA makes it easier for us to perform our SOC 2 Type 2 security reporting and gives us a great private cloud

environment," said Patterson. "Because everything is fully scalable and protected, we can better serve our customers."

Ultimately partnering with OTAVA has helped Form I-9 to significantly reduce its OPEX and CAPEX, substantially improve the performance and reliability of its systems, and achieve rock-solid data protection and compliance. All of this contributes directly to the ongoing happiness of its partners and customers.

The inherent scalability of OTAVA's Private Cloud and DRaaS combined with its predictable operating costs means that Form I-9 is well-positioned to continue its rapid growth while maintaining excellent levels of support and performance for its customers and partners.

"Hosting our service with OTAVA's private cloud has given us the ability to scale up as needed," said Patterson. "We can now meet any transaction volume requirement to satisfy any amount of new clients and partners which gives us and our customers peace of mind."

“Because everything is fully scalable and protected, we can better serve our customers.”

About Form I-9 Compliance

Form I-9 Compliance is the premier provider of Form I-9 and E-Verify® solutions. Its business-critical documentation and identity verification services are used by thousands of client firms, employers, Independent Software Vendors (ISVs), and consulting firms. The company's solutions have been described by the Executive Director of the Center for Immigration Studies as, "Doing for I-9 and E-Verify what Turbo Tax does for tax filing."

With a goal to make the I-9 process simple, Form I-9 Compliance sought a technology solution that would allow it to maintain focus on the growth of its core business while driving operational and cost efficiencies.

Contact OTAVA today to learn more about how we can help your organization reach your objectives with the power of cloud technology.

OTAVA® is a global and recognized leader in delivering secure multi-cloud solutions with a personal touch. Its extensive portfolio is powered by world-class technology partners, backed with expert intelligence, and tailored to help businesses and service providers achieve their individual goals while protecting mission-critical data. With its flexible solutions, fortified security, colocation offerings, and professional services, OTAVA empowers its clients with everything they need to thrive in the cloud and stay focused on what they do best.
